TOOLS REQUIRED

- Spirit level, large set square (or 'Rafters Square'), Spade, Screwdriver (preferably powered)

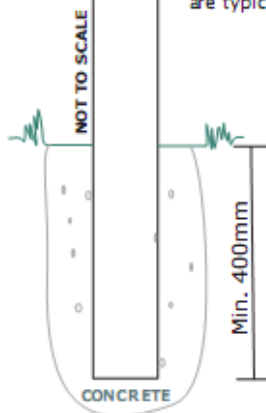

MATERIALS REQUIRED

- Concrete (e.g. - 1 x 25kg bag of 'Post-Fix') [approx £5 at B & Q]

Step 1 - It is recommended that the post is first concreted into a pre dug recess (ideally 450mm [~18"] should be below ground). Use a spirit level on two faces to get upright. Prop as required and leave overnight to harden.

Step 2 - Signs (also called fingers) are supplied loose. Locate all fingers into the central post and ensure they sufficiently rebate into the provided mortice slots (note pencil marks are provided as a guide). At this stage the signs will hang loose.

Step 3 - Depending on your order requirements, signs are secured by either hardwood pegs or brass screws. Working in a pair, progress round the post using a large set square (or rafters square) to get signs perpendicular to the post. Using the predrilled holes fully fasten the sign with the supplied fixings, note additional screws / pegs are typically supplied for your convenience and can be discarded if not required.

NOTE: All directional signs we supply have been trial assembled by our team prior to shipping.

Timber products will shrink and expand due to climatic conditions and it is strongly recommended all signs are erected as soon as possible from receipt to minimise problems with assembly.
